

DSP&P #22, "Crested Butte"

This is the first largescale Mason Bogie I built. It is mostly scratch built atop a Lionel 0-6-0T toy loco. This was one model where the Lionel Toy just yelled out at me to turn it into a famous Mason of the DSP&P. The model represents DSP&P #22, "Crested Butte" as she might have looked around 1883. However further research and the Masterclass into Mason Bogie building has proven the loco probably never actually ran in this configuration! She is still one of my favorites!
